Julia Bernd is a Research Scientist in Usable Security and Privacy at ICSI, where her research focuses on user privacy expectations, human-computer interaction, differential impacts of new technologies on at-risk populations, and the intersections of privacy and social power dynamics. At ICSI, she has been involved in program evaluations; curriculum projects in privacy, security, and the social impacts of computing; and open-access corpus development. She has also worked as a researcher at UC Berkeley and a research consultant at Cause Data Collective. She received her MA in linguistics from Stanford University.
